

# ADI.js

---

## Why I chose ADI.js

I chose ADI.js as my plugin because I have seen adblock detectors before. There are a few websites I use that have a sidebar that asks you to remove it, and they take the place of ads. They simply remind you that the ads are how the company pays for the website, and then let you browse.

I have wondered a few times how they use them, and how they get it set up. I still don't know entirely how ADI.js detects the ad blocker, but I do understand how to set it up, and that's a start. I plan to look more into it in my spare time over Thanksgiving break.

## Creating the Presentation

I think that creating the presentation was fun. I never knew (before this class) that there were HTML5 presentation creators, and it was a lot of fun to learn reveal.js earlier in the class. I chose to use reveal.js so as to not overload myself on learning new plugins, but I want to learn about other presentation plugins as well.

Learning adi.js proved much easier than I thought, and I almost wish I had picked a more difficult one. However, it's good that I did not. This past week has been extremely busy and I did not anticipate how much happened. I felt a bit rushed near the end, but that was my fault.

I enjoy video editing as a side hobby, and I'm glad I got to do a video for this! I wish there had been more actual editing, but that's alright.

It was really fun picking my own plugin and having an option in my learning. I know now how to make my own detector, so I don't need to wonder how other websites have done it!
